

CMP 1001 – Introduction to Programming – Fall 2020

Course Evaluation Document

Quizzes (20%): The quizzes will be conducted during each week's lecture. There will be a few questions in each quiz which can follow different formats (i.e., multiple choice questions, short answer questions, short coding questions) over the It's Learning system. Quizzes will not have any make-up options.

There will be **8 quizzes** in total.

Midterm Exams (40%): There will be **2 MIDTERM EXAMS** during the course.

The midterms will take place in an online setting. You will be asked several questions through the It's Learning system and expected to submit a code for each question. Your codes will be run with some test input – output couples. Your midterms will be graded by the correctness of the outputs of your program for each input.

NOTE: In the Midterms, if any of your codes **CANNOT BE COMPILED AND/OR RUN**, you will get “0” grade from that question regardless of the length of your code.

Final Exam (40%): The Final exam will be similar to the Midterms. It will include **ALL** the C++ materials we have covered during the course.

NOTE: In Final exam, if any of your codes **CANNOT BE COMPILED AND/OR RUN**, you will get “0” grade from that question regardless of the length of your code.
